Summary

Data Engineer with experience building scalable ETL/ELT pipelines and Azure cloud data platforms using ADF, Databricks, ADLS, Synapse, Snowflake, Python, SQL, and Spark. Skilled in data modeling, Spark transformations, data quality, performance tuning, and delivering analytics-ready datasets for Power BI and business decision-making.

Skills

Programming & Data Engineering: Python, OLAP, SQL, Spark SQL, Shell Scripting, ETL/ELT Pipelines, RESTful APIs, Data Ingestion, Data Transformation, Azure Data Factory, Azure DataBricks, Apache Spark, Confluent Kafka, CDC, SCD Type 1/2/3

Cloud Data Platforms & Warehousing: Azure, AWS, Azure Data Lake Storage, Azure Blob Storage, Azure Synapse, Azure SQL, Microsoft Fabric, Snowflake, AWS S3, AWS Athena, AWS EC2, Data Lakes, Data Warehouses, Star Schema, Dimensional Modeling.

Analytics, BI & ML: Power BI, Tableau, Advanced Excel, KPI Tracking, Business Intelligence, Logistic Regression, Streamlit, Feature Store, Data Quality, Data Validation, Performance Tuning, Cost Optimization.

DevOps, Governance & Domains: Azure Pipelines, Azure DevOps, GitHub, CI/CD, Microsoft Purview, Databricks Unity Catalog, Agile, JIRA, Confluence, Finance, Sales, Orders, Supply Chain, Logistics, Inventory, Healthcare Data, B2B integration, data mapping.

Experience

Data Engineer | LVT Labs | Atlanta, GA

Aug 2025 – Present

- Designed scalable healthcare data pipelines using Python, PySpark, Azure Data Factory, and ADLS to ingest and process structured, semi-structured, and REST API data for the Health Chrono platform.
- Developed Snowflake ELT workflows using staging tables, Streams, Tasks, and MERGE-based processing to support incremental loads, historical tracking, and scalable analytical workloads.
- Orchestrated multi-stage workflows using Apache Airflow, implementing task dependencies, retries, SLA monitoring, and failure notifications, reducing manual pipeline intervention by approximately 35%.
- Implemented event-driven processing with Confluent Kafka, Kafka Connect, and Schema Registry to stream transaction, validation, and approval events into downstream analytics and audit systems.
- Optimized PySpark transformations, SQL queries, partitioning strategies, and Parquet storage layouts, reducing pipeline execution time by nearly 25% and improving compute efficiency.
- Established automated data-quality controls, including schema validation, duplicate detection, reconciliation, null checks, and audit logging, improving the reliability and traceability of healthcare datasets.
- Designed dimensional models, fact and dimension tables, and analytics-ready data marts in collaboration with engineering, product, and reporting teams to support KPI reporting and business intelligence.
- Automated deployment and testing of data pipelines through Git-based CI/CD workflows, environment-specific configurations, and production monitoring, improving release consistency and operational stability.

Technical Representative, Data Engineer | Tata Consultancy Services | Mumbai, MH

Jul 2020 – Dec 2023

- Supported Goodyear Tires' critical parts supply chain management system, helping production teams track component availability, supplier delays, inventory movement, and risks affecting manufacturing-line continuity.
- Engineered enterprise ETL pipelines integrating Oracle, SQL Server, SAP, REST APIs, Excel, and flat file data into Azure Data Lake and Azure Synapse Analytics.
- Developed batch and near real-time workflows using Python, PySpark, Azure Data Factory, Event Hubs, and Stream Analytics to process critical part orders, shipments, and inventory updates during Covid supply chain disruption.
- Designed star schemas, fact and dimension tables, CDC pipelines, and slowly changing dimensions to enable consolidated supply-chain reporting across EMEA, AMER, and APJ.
- Built Power BI dashboards and KPI models for Lead Time Variance, Order Fulfillment Rate, Critical Part Delay Index, supplier performance, and inventory availability, enabling earlier identification of production risks.
- Reduced Azure operational costs by approximately 15% and shortened report-generation time from three days to six hours through incremental loading, SQL tuning, parallel processing, and optimized compute utilization.

Projects

- Goodyear Tires Supply Chain** | [Github Link](#) : Designed a real-time supply chain solution on Azure Data Lake architecture, integrating data from both on premise systems and cloud (Oracle).
- Deep Facial Feature Based Person Re-identification** | [Research Link](#) : Achieved 85% person re-identification accuracy using deep learning and advanced noise removal for handling occlusion, illumination, and pose variations with 3 different methods.
- Heart Disease Prediction** | [Github Link](#) : Assessed a healthcare model using Logistic Regression & XGBoost, improving diagnostic accuracy by 25%. Developed a HIPAA-compliant data pipeline using MLflow, and Streamlit for prediction.

Education

UNIVERSITY AT BUFFALO – SUNY

MS in Engineering Science and Data Science

Buffalo, NY

Jan 2024 - May 2025

UNIVERSITY OF MUMBAI

BS in Computer Engineering

Mumbai, MH

Jul 2017 - Jul 2021

Certification and Publications

- Microsoft Certified: Azure Data Engineer (DP-203) and Confluent Cloud Certified Operator
